

Crop harvester

Harvesting machine for indoor grown crops

Experience the future of crop harvesting with our innovative machine, setting new standards for efficiency and productivity in indoor farming! Specifically designed for harvesting crops grown on trays, floats, rafts, or gutters, making it ideal for indoor farming and CEA facilities!

Harvesting with **high capacity & precision**

Equipped with two rotating cutting discs, this harvesting machine ensures precise and clean cutting patterns, allowing for multiple harvests of the product. The upright feeding mechanism ensures neat presentation and efficient processing. With its high capacity and precision, this fully automatic harvesting machine guarantees exceptional performance.

SYSTEM INTEGRATION

Harvesting, processing & packing

Indoor grown leafy green harvester

Versatile harvesting machine

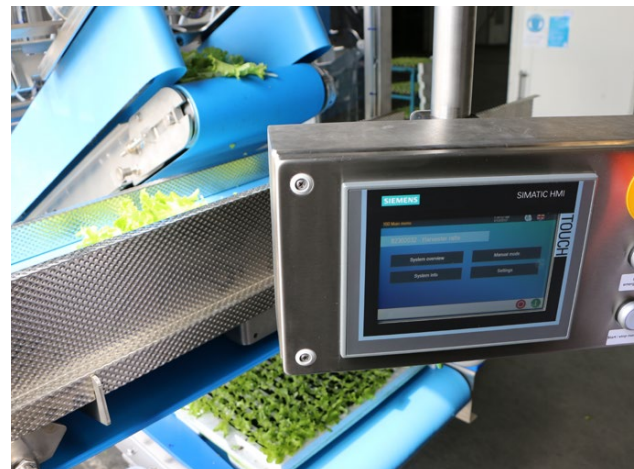

The harvesting machine can be seamlessly integrated into a fully automated harvesting line or function as a standalone unit, providing flexibility for different production setups.

Achieve full automation

Viscon provides automation solutions that cover every aspect of your production process. Meaning, from young plant production to harvesting & packing, and all logistic movements in between. Our software platform integrates all automation equipment, allowing complete control of your facility.

**Fully integrated solutions to handle
these delicate & high value products**

**Control & operation
through a Siemens
touchscreen interface**
