

WE ARE VISCON

Handling and robotics in agro & food

Passionate about agro & food processes and the limitless possibilities technology has to offer. Our machinery, software and integrated solutions enable the world to produce, distribute and enjoy healthy fresh food, flowers and plants.

**We design.
We build.
We fully
integrate.**

Automation

Specializing in automation solutions for product handling and intralogistic processes.

Software

Offering a full range of modules helping you to control, manage & optimize your production.

Service

Supporting you throughout the system's life cycle with a wide range of service solutions.

"We envision a world in which people, plants and animals can thrive."

WE ARE VISCON

We believe in continuous innovation

Expert teams build solutions

Since its establishment in 1927, Viscon has grown into an international organization, active in various agro & food sectors. Our ability to focus on different industry sectors is made possible by the unique structure of the group: a family of flexible, independent divisions, each with its own expertise in a specific market or product. Together these divisions form a strong team and can deliver a truly complete solution package.

Factory Intelligence

In-house software company developing the next generation of software that intelligently integrates work processes with your automation technology.

Hatchery Automation

Since the 90's, Viscon has invested its R&D skills in the hatchery industry and today is one of the market leaders in intelligent automation solutions.

Plant Technology

Bringing together reliable automation, software, and plant science: creating future-proof and innovative young plant automation!

Fresh Produce

As market leader in fresh produce logistics, Viscon provides scalable solutions to process, pack and store fresh produce with optimal precision.

Logistics

Viscon provides smart and efficient solutions for compact storage systems and material handling in both food and non-food industries.

Insect Technology

Viscon automates insect farming with optimized processes for black soldier fly larvae and mealworms. Insect farming technology tailored to your needs.
